

Stas Bratanich

Software Engineer

0528995966 | bstasb@gmail.com | [Portfolio](#) | [LinkedIn](#) | [GitHub](#)

Software Engineer with a strong backend orientation. Experienced in building scalable, event-driven web applications and optimizing complex data flows using modern technologies. A people-oriented problem solver who thrives in collaborative environments, passionate about bridging robust backend architecture with seamless user experiences.

SKILLS

- **Programming Languages:** C#, Typescript, Javascript, Java, C++, C, Python, Kotlin
- **Web Development:** ASP.NET, React, RabbitMQ, Next.js, HTML, CSS
- **App Development:** React Native, Android Studio
- **Database Management:** MSSQL, MongoDB, Firebase

PROFESIONAL EXPERIENCE

NGsoft / Software Engineer

2025 – Present

Develop and maintain robust web applications, handling both complex backend logic and modern frontend interfaces within an Agile environment.

- Led the architectural enhancement of an existing large-scale event-driven system. Dramatically improved load times by migrating heavy data processing from the client to the server.
- Designed and implemented complex SQL stored procedures to handle heavy core business logic, ensuring lean, efficient ASP.NET C# controllers and services.
- Expanded and maintained asynchronous messaging capabilities between microservices using RabbitMQ.
- Built a secure back-office web application to manage and forward user-submitted media to law enforcement, utilizing ASP.NET C#, React, and TypeScript.
- Delivered responsive frontend components using Next.js and TypeScript alongside developing custom backend modules in Umbraco CMS.
- Onboarded and mentored new team members, fostering a collaborative, knowledge-sharing team environment.

EDUCATION

- **BSc Computer Science** *HIT Holon Institute of Technology | 2020 - 2024*
- **Bookkeeping Levels 1 & 2** *The College Of Management | 2016 - 2017*

CERTIFICATES

DevOps on Amazon AWS

Coursera | 2024

Cloud Computing, Automation, CI/CD, Scalable Architecture

- Gained hands-on experience with AWS services including Amazon EC2, AWS Lambda, Amazon ECS, Amazon RDS, DynamoDB, and S3.
- Implemented and managed CI/CD pipelines, automated software releases, and monitored production environments using AWS tools.
